EDUCATION

Southern Connecticut State University

Master of Science in Computer Science

New Haven, CT

Jan. 2026 – Dec. 2027

Southern Connecticut State University

Bachelor of Science in Computer Science, Minor in Mathematics

New Haven, CT

Jan. 2024 – Dec. 2025

Rensselaer Polytechnic Institute

Troy, NY

Aug. 2020 – Dec. 2023

WORK EXPERIENCE

AV/IT Technician

Southern Connecticut State University

Apr. 2026 – Present

New Haven, CT

- Diagnosed and resolved 5–10 daily AV service tickets, troubleshooting projectors, speakers, and control systems.
- Collaborated with IT staff on AV infrastructure troubleshooting, reducing repeat incidents.
- Created a dynamic visual dashboard using PowerBI and VBScript to monitor classroom and student usage hours.

Information Technology Intern

Connex Credit Union

May 2023 – Aug. 2023

North Haven, CT

- Supported a core-system migration by validating data integrity and records for accurate post-conversion data.
- Resolved 5–10 daily helpdesk tickets across hardware, software, and network issues for 100+ employees.
- Imaged and deployed 50+ workstations using Acronis across office desktops and laptops.

PROJECTS

SpeedCubeMuse | *Python, Flask, Claude, pgvector, TiDB, Docker, Fly.io*

Jan. 2026 – Pres.

- Built an AI-powered natural-language-to-SQL interface over a 6.3M+ row WCA competition database, using Claude to translate plain-English questions into validated, read-only SQL for non-technical users.
- Developed a Retrieval-Augmented Generation chatbot for WCA regulations with Voyage AI embeddings, pgvector similarity search, and a reranker over 697 regulations, returning grounded answers with citations.
- Automated database maintenance into a single command via a Python pipeline that pulls the WCA export API and bulk-loads multi-GB data into TiDB Serverless, backed by an 89-test pytest suite for data integrity.
- Hardened the app with a strict CSP, per-endpoint rate limiting, and non-SELECT query rejection; deployed a multi-process Docker container (web app + Discord bot) to Fly.io via a GitHub Actions CI/CD pipeline.

Poke-Collect | *Python, Flask, Kafka, Cassandra, PostgreSQL, MySQL*

Mar. 2026 – Pres.

- Built a Pokémon TCG collection manager on a CQRS architecture with Python/Flask using MySQL for writes, Cassandra for read models, PostgreSQL + pgvector for vector search, and Kafka as the event bus.
- Engineered event-driven Kafka consumers that project write-side events into denormalized Cassandra read models, enabling JOIN-free queries across 4 cooperating distributed processes.
- Implemented a rate-limit-aware sync (146 sets from the PokéWallet API with idempotent upserts under a 100 req/hr budget) and lazy TCGPlayer price enrichment surfacing per-card and total portfolio value.

Developer Portfolio | *Next.js, React, TypeScript, Prisma, Turso, Claude*

May 2026 – Pres.

- Built a full-stack portfolio and session-authenticated headless CMS with Next.js 16, React 19, and TypeScript, deployed on Vercel with a Turso (libSQL) database via the Prisma driver adapter.
- Designed an interactive, themeable UI in Framer Motion featuring a self-scrambling-and-solving CSS-3D Rubik's cube driven by rotation-matrix layer turns, cursor-reactive parallax geometry, and 3D-tilt project cards.
- Integrated the Anthropic Claude API to auto-draft project entries from GitHub READMEs and rewrite content from natural-language instructions, using prompt caching and adaptive thinking.
- Built a custom visitor-analytics pipeline (page views, downloads, messages) with geo detection in a Recharts dashboard, plus admin CRUD over all site content with no redeloys.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, C, C++, C#, Java, HTML, CSS

Frameworks & Tools: React, Next.js, Flask, Node, npm, Vite, Docker, Kafka, Git

Data & Cloud: PostgreSQL, MySQL, Cassandra, TiDB, AWS, Fly.io, Vercel, GCP
