EDUCATION

Southern Connecticut State University

Master of Science in Computer Science

New Haven, CT

Jan. 2026 - Dec. 2027

Southern Connecticut State University

Bachelor of Science in Computer Science, Minor in Mathematics

New Haven, CT

Jan. 2024 - Dec. 2025

Rensselaer Polytechnic Institute

Troy, NY

Aug. 2020 - Dec 2023

WORK EXPERIENCE

AV/TV Technician

Southern Connecticut State University

Apr. 2026 - Present

New Haven, CT

- Diagnosed and resolved 5–10 daily AV service tickets, troubleshooting projectors, speakers, and control systems.
- Maintained equipment reliability by conducting regular maintenance on AV systems across 50+ classrooms.
- Collaborated with IT staff to coordinate AV infrastructure troubleshooting, reducing repeat incidents.

Information Technology Intern

Connex Credit Union

May 2023 - Aug. 2023

North Haven, CT

- Provided helpdesk support resolving 5-10 tickets daily across various hardware, software, and network issues.
- Collaborated with 5-person IT team to resolve technical issues across 6 branches, supporting 100+ employees.
- Imaged and deployed 50+ workstations using Acronis across a variety of office desktop towers and laptops.

PROJECTS

WCA Statbot | *Python, Flask, Claude, TiDB Serverless, Supabase, Docker, Fly.io*

Jan. 2026 - Pres.

- Built a full-stack AI web application that translates natural language questions into SQL queries against a 6.3M+ row WCA competition database, reducing the barrier to data access for non-technical users.
- Engineered a hybrid cloud database architecture using TiDB Serverless for 1.68GB of WCA competition data and Supabase for user authentication and saved queries, achieving a zero-cost hosting solution within free tier limits.
- Implemented Google OAuth sign-in via Supabase Auth with per-request JWT-authenticated database clients satisfying Row Level Security policies, enabling secure multi-user saved query persistence.
- Containerized and deployed the application using Docker and Gunicorn on Fly.io, writing Python automation scripts for data ingestion and configuring auto-stop/start machines with HTTPS enforcement.

Black Hole Sim | *C++/GLSL, TypeScript, React, Node, Express, PostgreSQL, AWS*

Sep. 2025 - Dec. 2025

- Built a full-stack user platform supporting simulation save/load, authentication, and feedback by integrating a React + Vite frontend with an Express 5 REST API backed by Supabase PostgreSQL, with JWT-based auth.
- Deployed a production-grade web app accessible to end users by configuring AWS Amplify hosting and CloudFront CDN distribution, with a decoupled backend served via Elastic Beanstalk.
- Engineered performance-critical C-like GLSL ray-marching shaders applying object-oriented design principles, achieving interactive real-time frame rates through adaptive step sizing and early termination optimizations.
- Developed educational content system covering 20+ astrophysics topics with NASA imagery integration.

TECHNICAL SKILLS

Languages: Java, C/C++, Python, TypeScript, JavaScript, MySQL, PostgreSQL, Cassandra, HTML/CSS, Haskell

Developer Tools: Git/GitHub, Docker, Linux, AWS, GCP, Fly.io, TiDB, Supabase, Visual Studio

Libraries & Frameworks: Spring, React, Node, npm, Vite, NumPy, Sklearn, Matplotlib, TensorFlow, Asyncio

Practices: Agile/Scrum, Object-Oriented Design, DevOps, Unit Testing, Machine Learning, CUDA

LEADERSHIP & ACHIEVEMENTS

World Cube Association: Ranked top 100 in the United States for 3x3 Rubik's Cube Average Time

SCSU Korean Club: Co-Founder and Vice President of the Korean Club at Southern CT State University
